your global trade
challenges

Live and generating
value in just 8-10
weeks

Native integration
with Oracle SCM,
OTM, and EBS

300+ trade
agreements
supported

Scales across
divisions, regions, and
transaction volumes

Oracle GTM is more than a compliance tool. It's the foundation for global trade, done right.

Global trade is evolving faster than most systems can handle. The real challenge isn't your team — it's the growing complexity of trade regulations and the pace of change. Legacy systems and disconnected processes simply aren't equipped to keep up, leaving you reacting slowly and missing opportunities.

Enter Oracle Global Trade Management.

You need a purpose-built, modern platform that tracks every order, every shipment, every policy change, and every physical roadblock. Oracle GTM doesn't just flag potential problems like tariffs, or potential opportunities like trade incentives. It quantifies the real-world risks and impacts, then recommends an optimal course of action.

Why Oracle GTM and Redwood?

1

One platform, for complete visibility and control.

Forget disconnected tools and patchwork fixes. Oracle GTM is a specialized platform that gives you real-time visibility and control, via a single solution. From first mile to last, it's ingesting current data about orders, shipments, tariffs and duties, compliance, sourcing, and customs. It's sending alerts and making recommendations. Your planners can act faster, smarter, and more confidently, backed by a single version of the truth.

2

Hands-on experience in global trade and supporting tech.

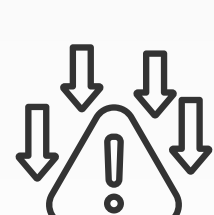

With Redwood driving your Oracle GTM implementation, you'll benefit from our decades of firsthand experience and hundreds of Oracle customer success stories. You'll also leverage the deep global trade experience of Redwood International and Redwood Mexico. Because there's no one-size-fits-all global trade strategy, every Oracle GTM footprint is different. Redwood is the rare partner who understands both aspects.

3

Bring together technology and execution leadership.

Redwood is not only a longtime member of Oracle PartnerNetwork (OPN), but also an Oracle user. No partner is better prepared than Redwood to configure and install Oracle GTM, integrate it into your technology architecture, train users, support cultural change, and otherwise drive a successful launch.

REDUCED RISK

You can't afford to rely on guesses in today's complex, fast-moving world. Intelligence and automation drive fact-based recommendations and predictable results.

GREATER COST CONTROL

Track costs like tariffs in real time, while simulating the ideal total landed cost scenario. Then take action to get there, enabled by intelligence.

IMPROVED OPERATIONAL EFFICIENCY

Automated processes replace manual work and hands-on interventions. Stop chasing and start leading, with speed and precision.

INCREASED PLANNING CONFIDENCE

Optimized trade planning is dynamic, agile and fueled by real-time data. The result? Smarter, more confident demand, sourcing, and supply plans that reflect internal and external realities.

What does global trade success look like with Redwood and Oracle?

Don't look now, but you're losing ground.

In the time it took to read this infographic, a global trade parameter just changed. From new tariffs and currency fluctuations to blocked lanes, stop scrambling to keep up. Start leading today with Oracle GTM, expertly launched by Redwood.
