

# Project Logistics: Let Redwood Do the Heavy Lifting

Everyday logistics challenges are only amplified when you're moving special cargo. Redwood can help you master them.

Shippers moving large, bulky, heavy, unusually shaped and high-value cargo face unique challenges:

**High costs and limited carrier options**

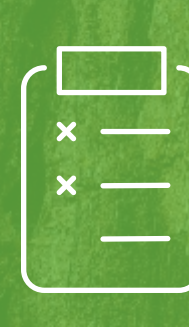

**Lack of visibility and control**

**Delayed response to disruptions**

**Special handling requirements**

**Compliance and regulatory issues**

# R

**Your job is tough. Redwood makes it easier.**

As a modern 4PL, Redwood Logistics can support all your project logistics needs, from brokerage services to managed transportation and advanced technology implementations. Our flexible, diverse portfolio of solutions and deep industry experience will bring your toughest projects in on-time and on-budget, based on a project logistics plan that's built specifically for you.

1

## Maximize both your cost and service outcomes.

Customers' delivery expectations are growing, but it's hard to combine fast delivery with specialized assets, white-glove handling, real-time GPS tracking and other project logistics needs — while also protecting your profit margins. Redwood connects you with a wide network of carriers who specialize in project logistics, leveraging our shipping volumes to combine low rates with the personal attention your projects demand.

2

## Leverage the power of advanced technology.

Too many shippers manage the complex job of project logistics with manual processes, paperwork and outdated systems. Redwood delivers advanced technology solutions that automatically optimize routes, schedules and resource allocation. Digitalization supports faster, more efficient execution, while minimizing planning time and effort. It also simplifies real-time tracking, minimizes risk exposure and drives more confident decisions.

3

## Respond to disruptions with speed and resilience.

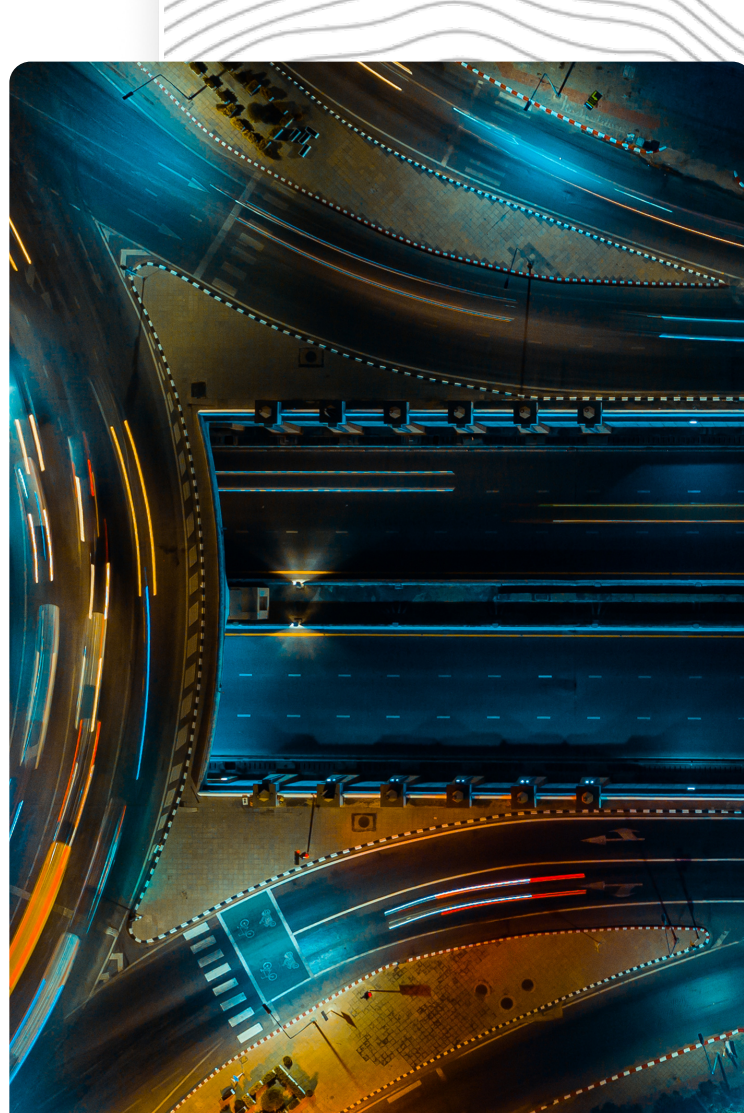

From extreme weather to market volatility, disruptions have become commonplace. It can be difficult to pivot quickly and agilely when it comes to project logistics, but Redwood helps build your operations for speed and resilience. Redwood can choose from multiple carriers, modes and routes, as well as conduct scenario planning and define contingency measures that ensure success, no matter what the future holds.

4

## Ensure process standardization and regulatory compliance.

Project logistics involves special handling requirements, transportation protocols, and national and international regulations. Redwood establishes standardized processes that are built to ensure accuracy and compliance, from order entry and labeling to permits and documentation. Redwood also ensures that any digital communications meet the strictest protocols for data privacy and security across your customers, carriers and other trading partners.

5

## Think outside the box.

The robust diversity of solutions and expertise within Redwood's 4PL ecosystem enable us to approach every project with innovation and creativity. Redwood has no vested interest in a single solution, service or partner — instead, we bring in the right capabilities and expertise to solve your specific challenge. Redwood is backed by years of customer success, but we also pride ourselves on continuous innovation, utilizing the latest transportation technologies and emerging best practices.

**Together, we can move mountains.**

Why take on the big challenge of project logistics alone? Redwood can help with the heavy lifting by delivering brokerage services, managed transportation, advanced technology solutions and other capabilities that support your success.
