

You've already invested in cutting-edge logistics technologies. Now make them work smarter for you.

Global logistics is a complex job, managed by multiple technology systems. The problem? In most supply chains, these systems aren't integrated, leading to:

1

Siloed, scattered data:

"I can't report on my inventory, sales, and logistics data in one place."

2

Lack of real-time connectivity:

"I lose visibility on shipments since my ERP, WMS, and TMS don't speak to each other"

3

Inconsistent processes:

"It's difficult to standardize processes and data because each division operates differently."

4

Delayed responses:

"It takes me too long to identify issues and disruptions since my data is not in one single system."

5

IT Bottleneck:

"Our IT team is consistently overburdened with competing priorities which creates demand for new integrations and enhancements."

6

Slow Carrier Onboarding:

"It's difficult to react quickly to market shifts and adjust tendering strategies when onboarding my domestic and international carriers."

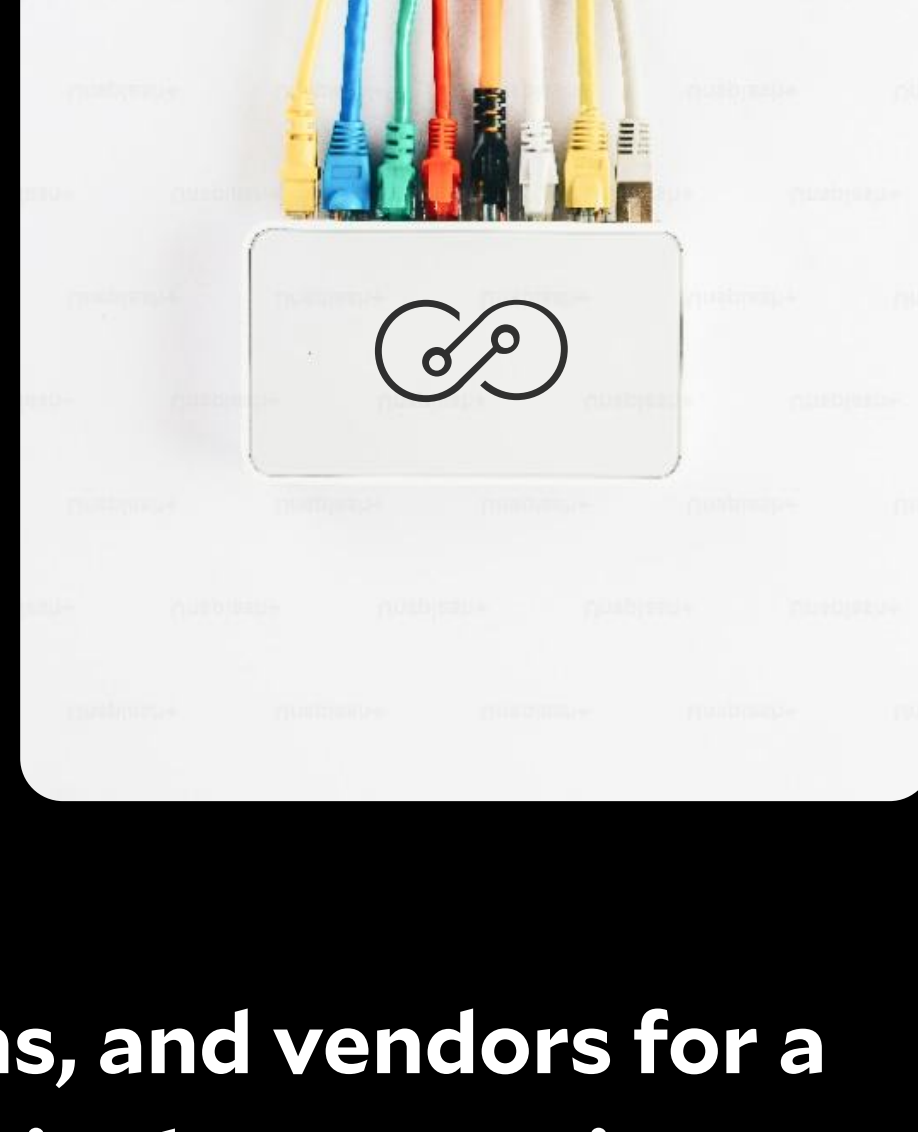

REDWOOD CONNECT TO THE RESCUE

Fortunately, Redwood Logistics offers a purpose-built, proprietary solution.

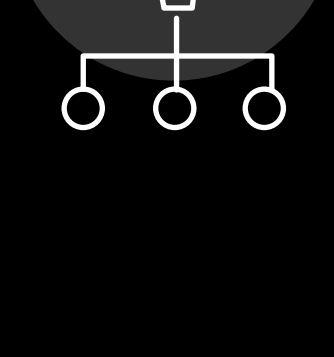

RedwoodConnect is the first integration platform as a service (iPaaS) designed **for** logistics teams, **by** a team of logistics experts. RedwoodConnect seamlessly handles complex EDI transactions and connects data and software applications across the entire value chain – from external trading partners to internal applications and data solutions. It seamlessly connects your complex logistics operations for end-to-end supply chain visibility, synchronization and responsiveness.

Paying the Price for Slow Integration?

Achieve Supply Chain Agility with RedwoodConnect

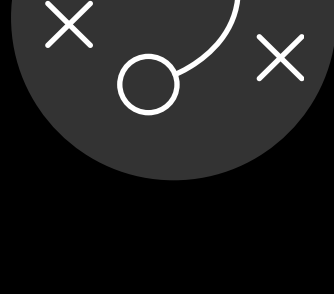

Connect with carriers, systems, and vendors for a lifetime of value through a single connection.

Integrate once, gain continuous value:

RedwoodConnect is a lifelong partner in your supply chain management, evolving with your needs.

Sustained Agility and Partnership:

Unlike generic solutions, RedwoodConnect is a "plug-and-play" platform that adapts quickly and efficiently as your operations or market demands change.

Future-Proof Your Supply Chain:

RedwoodConnect is an investment in a partnership that grows and adjusts alongside the industry. This ensures your supply chain remains robust, flexible, and ahead of the curve without needing constant IT intervention.

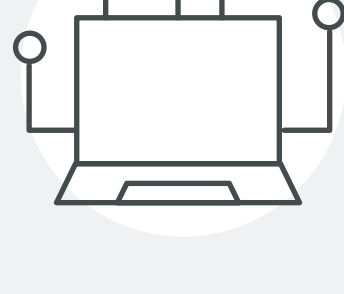

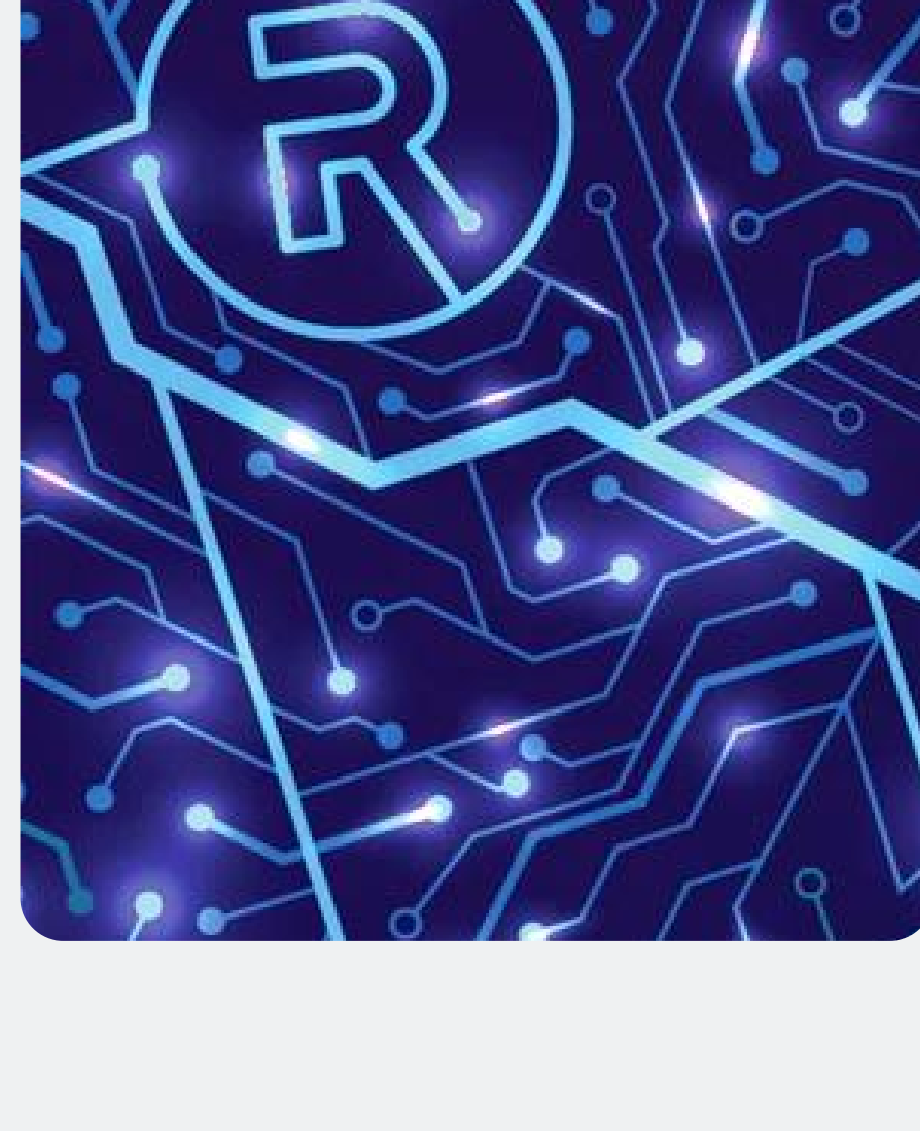

Empowering Adaptability:

Our platform's architecture is designed for long-term flexibility, enabling your business to stay agile in a fast-paced world. Adaptability is built-in, ensuring your logistics operations can swiftly respond to market shifts and operational demands.

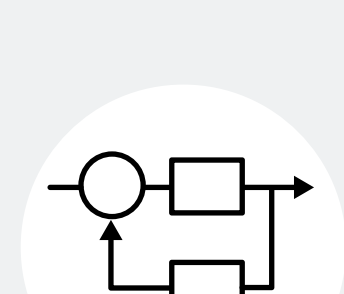

Beyond Integration:

The RedwoodConnect Advantage

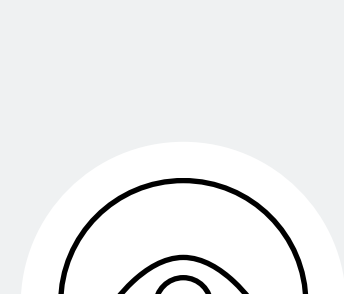

Seamless Integrations:

A single integration point connects your existing enterprise systems. RedwoodConnect empowers logistics and supply chain teams to manage integrations independently. Add or remove partners, integrate new technologies, and sunset obsolete solutions—all to ensure a nimble and flexible digital supply chain strategy.

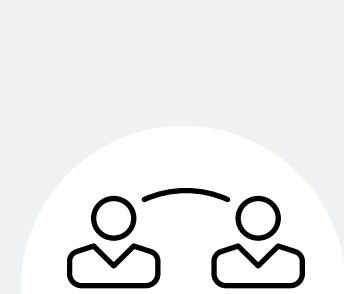

Dynamic Adaptability:

Supply chains are not static; RedwoodConnect supports frequent adjustments to integrations, mirroring changes in the market or operational demands. This fosters an environment of constant enhancement and adaptability.

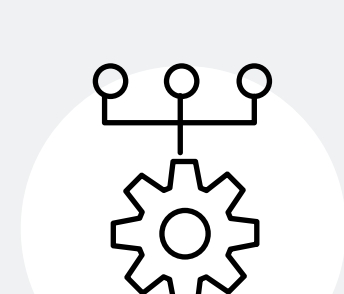

Visual Monitoring and Control:

Even non-technical logistics users can visually monitor connections and quickly address data discrepancies—common occurrences in the industry—without needing IT support.

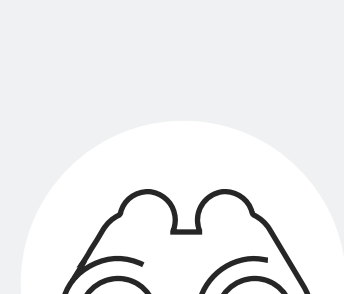

Flexible Support Options:

Choose to manage integrations independently or leverage our 24/7 support team to oversee data flow and ensure smooth operations.

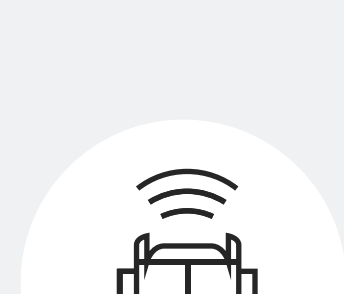

Data integration:

RedwoodConnect efficiently channels all operational supply chain data to your preferred data warehouse, eliminating traditional bottlenecks and streamlining data management.

Effortless EDI & Enhanced Visibility:

RedwoodConnect seamlessly integrates EDI transactions, automating data exchange with partners and carriers. This ensures data security, eliminates manual processes, and provides real-time supply chain visibility for improved collaboration.

Built for Logistics:

Unlike traditional iPaaS solutions, RedwoodConnect handles complex logistics data objects with ease, designed specifically for the unique needs of the logistics industry. Additionally, our user-friendly interface allows logistics users to manage their own integrations, minimizing reliance on IT resources.

Connect to Win

Today's logistics environment is too fast-moving and complex to manage via a series of disconnected, disparate solutions, processes and data streams. Instead, you need a connected ecosystem that's aligned for speed, accuracy, efficiency and responsiveness. Contact us for a free network assessment or to view a demo of RedwoodConnect — and start realizing a serious competitive advantage.
